aqos-classify (Go), Unix socket
259 boosted trees
7 class probabilities
Decision engine
expected damage and guards
aqosd, the controller (Go)
Intent leases
HTTP API
leased classes
Capacity estimator
3 reflectors, every 100 ms
rate proposal
label proposal
Safety shield
window record on breach
accept or clamp
feature record
Heartbeat
every 250 ms
Enforcer
snapshot, apply, read back
file age
set mark
undo proposal
set shaper rate
Linux kernel: the only per-packet path
aqos-watchdog
separate process
conntrack
mark = the flow's tin
Home devices
counters, every second
silent 2 s: plain CAKE
mark read for every packet
Reclassifier
class envelopes, every 1 s
CAKE diffserv4
upload on wan0, download on IFB
headers of packets 1 to 8
tin delay
Feature extractor
first 8 packets, nflog
QoE verifier
tin delay before and after
